Steve Smith, Ph.D. serves in a variety of role to connect learning and earning. Workforce and Economic Development play a core role in my career. My career spans professional services firms, healthcare informatics projects, manufacturing, academia and other skunkworks projects.

Steve led numerous projects in the healthcare informatics space. These projects ranged from associate development to client facing large software implementations. The projects ranged from oncology clinics to large healthcare organization implementations to Department of Defense (DoD) work. Improving healthcare is a lifelong journey and adventure.

His 30+ year career spans early adoption of video conferencing and other technologies. These technologies drive business efficiency and effectiveness. We have barely scratched the surface on what technology can do to improve performance and quality of life.

Steve's non-profit service includes 20+ years at the American Royal and leading various other groups including Korean language learning software, India-based healthcare informatics and refugee workforce development efforts.

Steve's earned a Ph.D. at Indiana University.
